(g) department

1. Find the list of all taught `courses_ids` and their teachers' name.
2. For each time a course was taught, output its title (and not the `course_id`) together with its teacher's name.
3. For each department, find the maximum salary of instructors in that department.
4. Find the total enrollment of each course/section/semester/year.

Here is the schema for a new database:

Employee Database

`employee`(name, street, city)
`works`(name, company_name, salary)
`company`(company_name, city)
`manages`(name, manager_name)

5. Find all employees in the database who live in the same cities as the companies for which they work.
6. Find all employees in the database who live in the same cities and on the same streets as do their managers.
